

Projection: collapses 16 cells into the GCNN-equivariant subspace

input (η) : 16 independently-trained cells

(no group structure imposed)

orbit average

$$\tilde{\eta} = \frac{1}{|G|} \sum_g \phi_g(\eta) \quad (\text{inter-block})$$

output ($\tilde{\eta}$) : equivariant cell plane

rows are R^i -rotations of each other · GCNN-equivariant subspace
